

Evocab Anywhere

Now you can access your Evocab system when you are away from the office too

Evocab Anywhere enables Auriga clients to access their Evocab system from anywhere in the world, using just an Internet Explorer-enabled machine with Internet access.

The solution essentially provides remote control of an office-based machine, and is perfect for staff who need to access their office system from a remote location. For example, company owners can check on the system when they are not in the office (e.g. when away on business or holiday), and administration personnel can price work or administer Driver Barring from home if they are not able to get in to the office.

With Evocab Anywhere, managers and owners are no longer tied to using a dedicated PC or laptop to access their office system; any Internet Explorer-enabled PC can be used (PCs with virus protection are strongly advised).

Security & Support

The solution utilises SSL Encryption technology, and access is secured by Username and Password, provided by Auriga. Support for Evocab Anywhere is provided by the Auriga Help Desk.

Please note:

- Evocab Anywhere uses an existing Evocab client, so cannot be used to increase the overall number of users.
- It has a limitation of one concurrent user, so is not suitable for use as a remote office solution.
- Evocab Anywhere is not covered by Auriga's Out of Hours Support Cover.
