The Auriga dispatch system, by Trapeze

# A revolution in data dispatch...

## WHY DRIVE 360°?

Drive 360° is the complete driver solution: a uniquely flexible system that offers everything your drivers need to do their jobs. Whether inside or outside the vehicle, Drive 360° ensures that drivers have access to their working system, and offers the freedom to connect via either PMR or GPRS.

## DRIVE 360° VISION

Drive 360° Eclipse is the first mobile device to offer Private Mobile Radio (PMR) connectivity. Connect the unit to Trapeze's Drive 360° Connect\* and your drivers can use your free, privately-owned PMR network when in radio range, falling back to GPRS when working away or when taken out of the vehicle.

## CONNECTIVITY

The Drive 360° Connect\* makes it possible to communicate with in-vehicle taxi meters, and use external printers and swipes. It can also be discreetly installed under the dashboard, connecting to the Drive 360° Eclipse via a single cable for a quick, simple and clean in-vehicle installation.

## STYLE

An in-vehicle device has a serious job, but there's no reason why it can't look good at the same time. All dark shades and subtle lines, the Drive 360° Eclipse's crown jewel is its gorgeous 5" (800x480) touch screen. This is a unit that shows your customers the type of organisation you are: one that cares about its passengers, and about making the right impression.

## PORTABLE

As a portable device, the Drive 360° Eclipse offers drivers all of the flexibility of a PDA – but with the large screen and PMR/meter compatibility which traditionally come with an installed device. This means drivers are free to leave their vehicle when necessary, safe in the knowledge they won't miss out on jobs sent to them.

## READY TO GO

With on-board GPS, GPRS and an internal loud speaker, the Drive 360° Eclipse doesn't need a load of external devices before it is ready to use. And because it can be installed in seconds, it is ideal for new drivers who join the company – or for those who have developed a fault with any existing equipment. Just give them a unit and off they go!

\* The Drive 360° Connect is patented technology, unavailable anywhere else.

# Crystal Clear Job Pricing

## With *Fare Calculator* for Eclipse

*Fare Calculator* is an entirely in-built solution which shows the real-time price for a journey based upon the distance travelled, appropriate mileage rate, and waiting time – and displays it on the Eclipse's large 5" screen in the same way as on a taxi meter.

*Fare Calculator* ensures fairness for passengers, who know they are being charged the correct amount for their journey, and improves life for drivers, who no longer have to worry about what to charge for a job.

# Hassle-Free Unit Upgrades

With *Wireless  
Updates* for Eclipse

*Wireless Updates* is another superb addition to the Auriga dispatch system, offering the ability to update Data Unit software and configurations – including zone changes – over the air. That means drivers can ask their Drive 360° Eclipse to check if an update is available, and then wirelessly install it if there is.

No USB memory sticks or engineers with laptops – and no waiting around not working while people program your Data Unit. Drive 360° Eclipse is the ultimate in driver friendliness and ease of use.

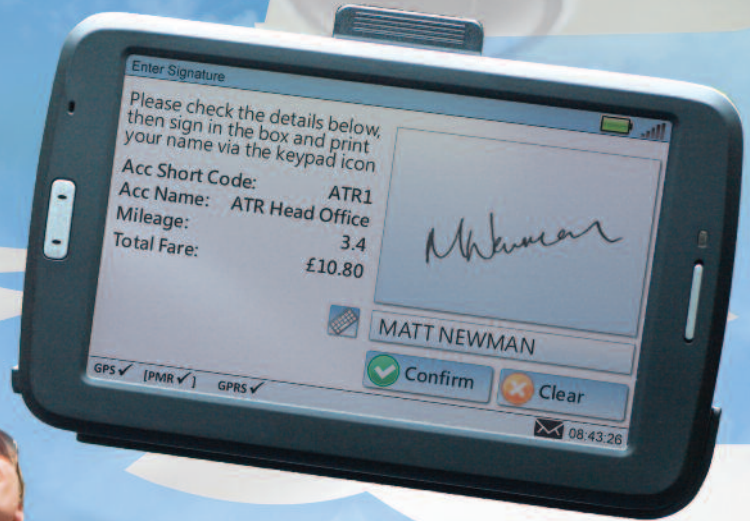

That's why we call it the Driver's Dream system.

# The End For Dockets?

## With *Signature Capture* for Eclipse

*Signature Capture* is a brilliant feature that offers the passenger the ability to sign and print their name on the Eclipse's touchscreen upon completion of a journey. The signature is then wirelessly transmitted back to the office, where it is 'tied' to the job for future reference.

Quick and easy to use; *Signature Capture* finally does away with account docketts. It's the future for account work.

# Feature packed

As well as the features outlined on the previous pages, and its gorgeous icon-based user interface, the Drive 360° Eclipse also contains all of the driver friendly features which made our CT4000 and CTPocket units so popular with drivers, including:

- Fully Integrated Satellite Navigation
- Driver Distance Preference
- Auto Callback/Text Alert
- Advanced Bidding
- Flexible Plotting Screen With Filters
- Auto No-Job Handling
- Give Job Back
- Multi-Fleet Compatibility
- Driver 'Notice Board' Messages
- 'System Busy' Warnings
- Driver Messages (Flags)
- Driver Emergency
- Roof Light Sensor (via 360° Connect)
- Personalised Visual Display
- Variable Contrast Settings
- Driver & Vehicle Document Warnings

... plus much more. For more information on these features, please download our Driver's Dream brochure from [www.auriga.co.uk/driversdream](http://www.auriga.co.uk/driversdream)
